

EARLY LEMON BERRY

Hybrid - 50% Sativa /50% Indica

Early Lemon Berry is a rare evenly balanced hybrid strain (50% indica/50% sativa) created through crossing the infamous Las Vegas Lemon Skunk X Member Berry strains.

Looking for an energizing high that won't throw you for a loop? You've found it with Early Lemon Berry. This lovely lady packs a bright and vibrant cerebral high paired with a super relaxing physical effect that will have you feeling mentally active while physically calm for hours on end.

It starts with a tingle felt behind the eyes and in the forehead, slowing spreading throughout the rest of your head and leaving you feeling lifted and mentally stimulated, filled with artistic energy and motivation. This tingle will soon work its way throughout the rest of your body, causing you to fall into a deeply relaxed state that's pretty arousing at times, too. Thanks to these effects its high THC level, Early Lemon Berry is said to be perfect for treating conditions such as chronic fatigue depression, chronic pain, nausea or appetite loss and chronic stress.

This bud has a bright sweet and sour citrus flavor with hints of ripe berries.

The aroma is very similar, although with an earthiness to it, too.

Early Lemon Berry buds have small tapered minty green nugs with thick dark orange hairs and a coating of frosty tiny white crystal trichomes.
